

Sander Garcia

Backend Software Engineer | Golang & Python | Microservices on AWS & GCP

📍 Florianópolis, SC, Brazil · ✉️ sander.garcia@ruscigno.com.br · 💻 github.com/Ruscigno · 🔗 linkedin.com/in/sander-rgarcia

Professional Summary

Backend Software Engineer with 6+ years of experience designing, building, and operating REST and event-driven microservices in Golang and Python for ERP, retail, and enterprise platforms. Proven track record delivering cloud-native services on AWS and GCP, owning systems end-to-end from API design through testing, deployment, and production debugging. Comfortable shipping React frontends for internal tools when product needs demand it. Strong advocate of clean code, TDD, and continuous improvement.

Core Skills

Languages: Golang (primary), Python (strong), Java, JavaScript/TypeScript **Backend & Architecture:** Microservices, REST APIs, Event-Driven Architecture, Async Workers, gRPC (basic) **Cloud — AWS:** Lambda, SQS, SNS, ECS **Cloud — GCP:** GKE, Cloud Run, Cloud Run Jobs, Pub/Sub, BigQuery **Databases:** PostgreSQL, Redis, MongoDB, BigTable, Oracle **Messaging:** Kafka, RabbitMQ, SQS/SNS, Pub/Sub **DevOps & Infra:** Docker, Kubernetes, Terraform (basic), GitHub Actions, Jenkins, CI/CD **Observability & Quality:** Datadog (APM, dashboards, custom metrics), SonarQube, TDD, Unit & Integration Testing **Frontend:** React (basic — internal tools, admin dashboards) **Frameworks:** Spring Boot, JUnit, pytest

Professional Experience

Backend Software Engineer (Golang & Python) — Contract

Omie · Florianópolis, SC (Remote) · Mar 2024 – Present

- Develop and maintain backend microservices in Golang for a high-volume ERP platform processing thousands of daily transactions across accounting and billing modules.
- Build Python data pipelines and batch jobs for invoice reconciliation and reporting, scheduled via Cloud Run Jobs and triggered by Pub/Sub events.
- Implemented a Redis caching layer for read-heavy endpoints, contributing to a ~20% reduction in average API response time.
- Instrument new services with Datadog (APM, custom metrics, structured logs); help triage incidents and improve observability dashboards.

- Actively participate in code reviews and pair programming with senior engineers; onboard new teammates to the codebase.

Stack: Golang, Python, PostgreSQL, Redis, GCP (Cloud Run, Pub/Sub, BigQuery), Datadog, GitHub Actions

Backend Software Engineer — Contractor

Lowe's Companies, Inc. · Mooresville, NC (Remote) · *Sep 2022 – Feb 2024*

- Contributed to an internal developer platform enabling product teams to provision AWS infrastructure through self-service workflows.
- Implemented Golang microservices integrated with Terraform and the GitHub API to support GitOps-based provisioning flows.
- Wrote Python scripts and CLI utilities to parse Terraform plans, validate inputs, and generate templates from approved patterns.
- Maintained and added features to the platform's internal React dashboard (provisioning status, request history, admin views).
- Raised test coverage on assigned modules from below 20% to roughly 65%, helping the team enforce a coverage gate in CI.
- Built event-driven orchestration features for dependency management between provisioned resources using PostgreSQL and RabbitMQ.

Stack: Golang, Python, React, PostgreSQL, RabbitMQ, AWS, Terraform, GitHub Actions

Backend Software Engineer (Junior → Mid-Level) — Full-Time

TOTVS · Florianópolis, SC (Remote) · *Jan 2020 – Aug 2022*

- Built features in Java (Spring Boot) microservices for an enterprise ERP product, then transitioned to a squad owning data tooling in Python.
- Developed Python ETL scripts and migration jobs to move legacy reporting data from Oracle to PostgreSQL, improving response times on key reports.
- Maintained React screens for an internal admin tool used by support engineers (CRUD forms, simple tables) — first production frontend exposure.
- Wrote unit tests with JUnit and pytest; reduced SonarQube technical-debt issues on owned modules.
- Participated in agile ceremonies (planning, retros, refinement), RFC reviews, and a light on-call rotation for non-critical services.

Stack: Java, Spring Boot, Python, React, PostgreSQL, Oracle, Docker, RabbitMQ, Jenkins

Education

Postgraduate Degree, Data Modeling, Warehousing & Database Administration

UNOPAR – Universidade Norte do Paraná · *Sep 2023 – Mar 2024* · **Grade: 9.7/10**

Coursework: Relational Databases & Big Data, Database Administration, Data Warehouse Modeling & Architecture, NoSQL, Data Integration & ETL, Performance Tuning, Data Governance.

Postgraduate Degree, Computer Software Engineering

UNOPAR – Universidade Norte do Paraná · *Aug 2023 – Feb 2024* · **Grade: 9.6/10**

Coursework: Software Architecture, Requirements Engineering, Cloud Architectures & Infrastructures, Design Patterns, APIs & Web Services, DevOps Practices, Configuration Management.

Licenses & Certifications

- **Google Cloud Associate Cloud Engineer** — Coursera · *Jan 2023*

Languages

- **Portuguese** — Native / Bilingual proficiency
- **English** — Full professional proficiency
